

INTERMEDIATE MAPINFO PROFESSIONAL AND DISCOVER

What will this course allow me to do?

A two day intermediate MapInfo Professional and Discover course for clients who are already familiar with the basics of the MapInfo Professional GIS program. The course will include various data presentation enhancements and analysis tools, advanced selection and object editing options and working with raster images and structural data.

The Discover Drillhole, Surfaces, Geochem and Graphing modules will also be covered in depth for clients wanting to get the most out of their surface sampling and downhole exploration data.

Prerequisites?

We ask that you have sound working knowledge of Windows and that you are familiar with tool button and menu driven applications, also familiar with MapInfo Professional GIS program (basics) before attempting this course

Features and Topics Covered

- Map Enhancement Tools
- Colour Tables/Legends/Titleblocks
- Advanced Object Creation and Editing
