

MAPINFO PROFESSIONAL INTRODUCTION COURSE

Who should attend the training?

This course has been specifically developed for both the novice MapInfo User or for those of who may be “out of practice”. By attending this new course you can unleash the power of MapInfo Professional and get some hands on experience with the latest version of the software.

What will this course allow me to do?

The MapInfo Professional Introduction Course defines the concept of a Geographic Information System (GIS) and provides you with an understanding of basic MapInfo Functionality that will enable you to create maps and analyze your data in a spatial context. We have also included several self-paced problem solving exercises that are designed to reinforce the various topics and features covered in this course.

Prerequisites?

We ask that you have sound working knowledge of Windows and that you are familiar with tool button and menu driven applications before attempting this course
